

Innovation at your fingertips.

ACUVUE® OASYS MAX 1-Day MULTIFOCAL Contact Lenses offer an unprecedented combination of three innovative technologies.

PUPIL-OPTIMIZED DESIGN: Helps you see clearly near, far, and in-between.

TEARSTABLE™ TECHNOLOGY: Designed to lock in moisture and reduce tear evaporation.§

OPTIBLUE™ LIGHT FILTER:** Blocks 60% of blue-violet light - the highest light filter in the industry.†

Plus, the highest classification of UV protection.*^

§ Versus ACUVUE OASYS 1-Day, DAILIES TOTAL1, My Day, INFUSE and Precision 1.

** Filtering of HEV light by contact lenses has not been demonstrated to confer any health benefit to the user, including but not limited to retinal protection, protection from cataract progression, reduced eye strain, improved contrast, improved acuity, reduced glare, improved low light vision, or improved circadian rhythm/sleep cycle. The Eye Care Professional should be consulted for more information.

† Versus publicly available information for standard daily use contact lenses as of July 2022.

* Helps protect against transmission of harmful UV radiation to the cornea & into the eye.

^ **WARNING:** UV-absorbing contact lenses are NOT substitutes for protective UV-absorbing eyewear such as UV-absorbing goggles or sunglasses because they do not completely cover the eye and surrounding area. You should continue to use UV-absorbing eyewear as directed. NOTE: Long-term exposure to UV radiation is one of the risk factors associated with cataracts. Exposure is based on a number of factors such as environmental conditions (altitude, geography, cloud cover) and personal factors (extent and nature of outdoor activities). UV-blocking contact lenses help provide protection against harmful UV radiation. However, clinical studies have not been done to demonstrate that wearing UV-blocking contact lenses reduces the risk of developing cataracts or other eye disorders. Consult your eye care practitioner for more information.

Important information for contact lens wearers: ACUVUE® Contact Lenses are available by prescription only for vision correction. An eye care professional will determine whether contact lenses are right for you. Although rare, serious eye problems can develop while wearing contact lenses. To help avoid these problems, follow the wear and replacement schedule and the lens care instructions provided by your eye doctor. Do not wear contact lenses if you have an eye infection, or experience eye discomfort, excessive tearing, vision changes, redness or other eye problems. If one of these conditions occurs, remove the lens and contact your eye doctor immediately.

For more information on proper wear, care and safety, talk to your eye care professional and ask for a Patient Instruction Guide, call 1-800-843-2020, or visit www.acuvue.com. © Johnson & Johnson Vision Care, Inc. 2023 | PP2023MLT4089

Are details getting blurry?

It could be **presbyopia**, which happens to nearly everyone in their 40s and impacts the ability to see things up close.

Symptoms may include:

- Difficulty reading small text
- Blurry vision in low light
- Headaches and eye fatigue
- Trouble focusing from near to far

Why multifocal contact lenses?

APPEARANCE & LIFESTYLE:

Wearing multifocal contact lenses, instead of taking readers on and off, helps to keep you feeling and looking younger.

WORK & SCREENTIME:

Read all your communications on any size electronic device without stretching your arm out or reaching for reading glasses.

EXERCISE & SPORTS:

See clearly while you play sports and exercise, without the fuss of wearing glasses.

WHAT TO EXPECT?

While multifocal contact lenses work differently than other contact lenses, one thing is the same — wherever you look, they work. Unlike progressive glasses or bifocals, they don't require you to look through a specific part of the lens.

Also, with multifocal contact lenses, it's not just about comfort and fit, it's about finding optimal balance of near, intermediate, and far vision for you and your unique needs. It's completely normal to have a follow-up exam where minor adjustments may be made to your prescription based on your initial experience.
